

Async 3.0 changelog

→ Implicit changed entity

- Most Async methods return a Promise when the final callback is omitted, making them `await`-able! (#1572)
- In `queue`, `priorityQueue`, `cargo` and `cargoQueue`, the "event"-style methods, like `q.drain` and `q.saturated` are now methods that register a callback, rather than properties you assign a callback to. They are now of the form `q.drain(callback)`.
