

Incompatible code snippet

```
1  \\Import Context...
2  var call_order = [];
3  var one = (val, cb) => {call_order.push('one'); cb(null, 1);};
4  var two = (val, cb) => {call_order.push('two'); cb(null, 2);};
5  async.applyEach([one, two, three], 5)((err, results) => {
6    console.log(call_order);
7    console.log(results);});
```

Coarse-grained human-written description

- `applyEach` / `applyEachSeries` have a simpler interface, to make them more easily type-able. It always returns a function that takes in a single callback argument. If that callback is omitted, a promise is returned, making it awaitable. (#1228, #1640)

Fine-grained change facts

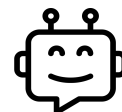

No external knowledge

LLM Response -> Invalid Behaviors

Incorrect root cause: *Callback Support Removed: Async v3.x deprecated callback usage in favor of Promises.*

Inapplicable repair: `- async.applyEach([one, two, three], 5, (err, results) => {`
`+ const results = await async.applyEach([one, two], 5);`

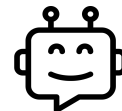

Lack of crucial facts

LLM Response -> Runtime Error

Correct root cause: *To use `async.applyEach` in v3.x, you now need to call the function it returns*

Inapplicable repair: `- async.applyEach([one, two, three], 5, (err, results) => {`
`+ async.applyEach([one, two, three])(5, (err, results) => {`

Fined-grained facts support

LLM Response -> Successful upgrade

Correct root cause: *To use `async.applyEach` in v3.x, you now need to call the function it returns*

Applicable repair: `- async.applyEach([one, two, three], 5, (err, results) => {`
`+ async.applyEach([one, two, three], 5)((err, results) => {`
